

Dunkermotoren wins third place in the "handling award 2021" in the category of electrical automation

Dunkermotoren impressed the jury of Industrial Production magazine in this year's competition for the "INDUSTRIAL Production - handling award 2021". With the BG 95 dPro servo motor in combination with the NG 500 hub gearbox, Dunkermotoren achieved third place in the electrical automation category. Dunkermotoren's solution was the best evaluated drive system. The award is given for innovative products from companies operating in the field of automation, robotics or intralogistics.

The use of automated guided vehicles (AGVs) has increased massively in recent years due to online trade and the increasing flexibility of manufacturing concepts. This has been particularly reflected in the increased demands placed on the drive systems.

With the BG 95 dPro + NG 500 complete drive, Dunkermotoren is the first drive manufacturer for automated guided vehicles to offer an ultra-compact, highly integrated travel drive with a range of functions never before realized, which meets all requirements and thus achieves an advantage over its competitors.

Dunkermotoren can use its modular construction kit and can develop and completely manufacture travel drives for AGVs not only as compact units, they can also match all components specifically to each other and thus respond individually to the requirements of the customer.
