

A dream start for projects in mechanical engineering

Which developer does not dream of quick test samples to gain first experiences with the drive unit? The newly developed starter set of our new Motor Control Platform fulfills exactly these wishes of the mechanical engineers. The customer can choose between different power packages from 20 W to 270 W.

The drive package includes a 4Q servo controller (BGE 5510 dPro) with a brushless DC motor of the BG series and an attached encoder system. Optionally, a matching planetary gearbox is also available as a single-stage or two-stage version. In addition, the set includes suitable connection cables and a programming adapter.

As soon as you have connected the motor with the control electronics configured at the factory, install the free commissioning tool Drive Assistant 5 and commission the unit without any major effort.

Use the unique opportunity to order one to three complete drive units at a special price. With our drive configurator on our homepage, you will certainly find a suitable motor combination. If you are not sure about the selection, our sales department will be happy to advise you.
